

## Expediting

### *Professional support*

In the case of expediting, we take care of the deadline monitoring and regular quality control for our customers until the final acceptance of the order. We support in communication, help with conflict resolution and find solutions together with our clients. Our team of experienced specialists can draw on many years of experience, particularly in mechanical engineering.

As a buyer, you have to rely 100% on the statements of the seller. In many cases, however, the overseas buyer has no possibility, at least not without great effort, to visit the supplier at short notice.

Especially in the case of larger projects, the delay of a supplier, despite all the built-in collateral, can lead to unforeseeable delays and significantly increased costs on the buyer side.

#### **We offer the following service:**

- Control of project progress
- Quality control
- Accompanying and supporting delegations
- Intermediate and preliminary acceptance tests
- Mediator in conflicts

#### **Advantages for our customers:**

- ✓ Regular control and monitoring of the supplier according to predetermined checklists in terms of quality and project progress through to dispatch
- ✓ Early identification of risks in terms of quality and delivery date
- ✓ Later upcoming production bottlenecks are avoided
- ✓ Reduced internal expenditure on resources and travel costs
- ✓ Bridge between supplier and customer
- ✓ Neutral and independent view
- ✓ We speak the local language and understand the mentality

In case of an interest in our range of services, we would be happy to send you a cost estimate according to your requirements.
